Nematodes Direct™

Slug Nematodes

Treats 40m²

Phasmarhabditis Californica
12 million

- Safe & natural
- Child, pet & wildlife friendly

Application Instructions:
Nematodes should be stored as soon as possible after delivery. They can be stored in the fridge or below 5°C until the expiry date on the package.

Do not freeze or expose to high temperatures. Minimum soil temperature for application 5°C.

The soil should be moist and should be kept moist for three to four weeks after application. Apply in the evening, when overcast or during rainfall. Water immediately after application.

If you are using over plants, water the plants within 30 minutes of application to wash the nematodes off the leaves and back onto the soil.

Application:
Apply the nematodes with a watering can with a coarse 1.4mm rose or a sprayer. If using a sprayer remove all filters finer than 1.4mm mesh. Spray using a maximum pressure of 5 bars through nozzles at least 0.5mm. Or apply using a nematode hose end applicator.

How to use:
Use the entire pack.

1. Make a stock solution by emptying the whole packet into 4L of water and stir continuously. Once mixed this solution needs to be used within 4 hours.

2. Take 0.5L of the stock solution and pour into a separate bucket and mix with 4.5L of water stirring continuously.

3. Move the 5L solution from the bucket into a watering can. One watering can will treat 5m².

4. Repeat this process until all the stock solution has been used then water the treated area with the watering can or a hose pipe.

Keep out of reach of children. Do not consume. If medical advice is required please ensure you have the product label to hand.
